

## LIP COLOR CHART

Not all colors may be used in lip products. The following recipes include colors that are approved for use on the lips. In general all the greens, and Ultramarines and Blues may not be used on the lips. The following recipes will give you deep colors. The best way to blend is to blend the pigment first (see your blending instructions) then add Blending Base 2 if you want a pearl effect or Blending Base 1 if you want a matte effect until you reach the depth of shade you desire. For a strong flat color you may use just pigment alone. After you have made your blend you may put it aside and then add as needed to the basic lipstick or pencil recipes. You will need approximately 1.5-2 large scoops per lipstick. I like to combine the pigments with micas for effect and two tone color. For example you could use 3 small scoops of Rose and 1 Large scoop of Carmine Mica, Or 3 small scoops of Eggplant and one Large Scoop of Bordeaux Mica. The combinations are only as limited as your imagination. Don't be shy about experimenting but make sure you wear gloves and cover your counter as these pigments are strong and will stain.

Red #6 2 small scoops  
Red #7 2 small scoops  
Red Iron Oxide 2 small scoops  
Black Iron Oxide 3 small scoops

COCOA

Red Iron Oxide 6 small scoops  
Black Iron Oxide 5 small scoops  
Yellow #6 1 small scoop  
Red 7 1 small scoop  
Red 6 1 small scoop

TAN

Tan Oxide 1 large scoop  
Brown #2 1 small scoop  
Black Iron Oxide 1 small scoop  
Yellow Iron Oxide 2 small scoops  
Blue 1 1 small scoop

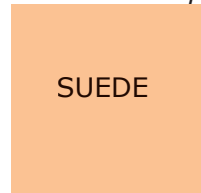

# COLORS FOR BLUSH AND EYESHADOW

The colors in this chart may be achieved by blending the basic colors listed below and then blending them with either Blender Base #1 or #2 till you achieve the shade you want.

As a guideline first blend your colors together to get the tone that you want. We have tried to give a good representation of the colors in this chart but it is hard to get a right match with the computer and since we are using scoops instead of weights there will be some variation. For this reason just make a small amount first.

Next start blending in your Blending Base. If you are after a blush or eyeshadow with a pearl effect using Blender Base #2. If you are after an shadow or base with a Matte Effect Use Blender Base #1. When you have reached the color shade that you like you are ready to put the color aside to blend with the rest of the formula.
